Gu Jin gj2325  
Yicheng Li yl4251  
Zixuan Zhang zz2777

## Part 1

We presented the initial demo at 12 PM on Nov. 23rd to our IA Rennah.

Overall the presentation went smoothly and all functionalities were okay. However, the IA did point out that the frontend needs some major overhaul to improve user experience.

We have four user stories detailed in the last submission. All of them were successfully demonstrated during the presentation:

*User should be able to log in to the app to access diet history*

*User should be able to add new diet and remove/edit diet history*

*User should be able to add/remove workout entry*

*User can get customized diet advice based on his/her diet history*

In addition, we implemented the advice service (a naive version) which was temporarily removed from the iteration report and showed it during the demo.

## Part 2

Link to codebase with tag: <https://github.com/KarlLeell/ASETeamJVM/tree/v1.0a>

Note that (1) the reports are not demoed so are not included in this tag, (2) the frontend is packed as a submodule and shows up correctly in the GitHub UI but not directly in the release zip file.
